Place of purchase:
Work performed by:
Date:

ABM07 conditions (Swedish; General Construction Purchase Conditions) apply to Plannja deliveries. Warranty conditions refer to applicable parts of ABM07. The warranty is valid from the date of purchase for deliveries from January 1, 2013. The consumer's legal rights are not affected by this warranty.

The warranty applies to the quality of coated aluzinc sheet. The warranty applies to the structural integrity, i.e. that cracks or holes do not occur due to corrosion, of aluzinc sheet coated with 185 g/m² on both sides and intended for construction purposes indoors and out. As per Table 1.

Table 1, SHEET

Coating	Warranty against rust-through	
	C1–C3	C4
Aluzinc 185 g/m ²	25 years	15 years

Table 2

Corrosivity class	Environmental corrosivity	Environment example	Suitable
C1	Very low	Heated spaces with dry air and insignificant levels of air pollutants; e.g., offices, retail stores, schools and hotels.	Aluzinc 185 g/m ²
C2	Low	Atmospheres with low levels of air pollutants. Unheated spaces with varying temperatures and humidity. Low frequency of condensation and low levels of air pollutants; fitness centres, warehouses.	Aluzinc 185 g/m ²
C3	Moderate	Atmospheres with a degree of salt or moderate levels of air pollutants. Urban areas, light industry zones and areas with some coastal influence. Open spaces with moderate humidity and some air pollutants from production processes such as breweries, dairies and laundries etc.	Aluzinc 185 g/m ²
C4	High	Atmospheres with a moderate amount of salt or noticeable levels of air pollutants. Industrial and coastal areas. Open spaces with high humidity and high levels of air pollutants from production processes such as chemical industries, indoor pools, shipyards.	Aluzinc 185 g/m ²
C5-I	Extremely good (industrial).	Industrial areas with high humidity and aggressive atmospheres. Spaces with near permanent condensation and high levels of air pollutants.	Not suitable; contact Plannja
C5-M	Extremely good (Maritime).	Coastal and offshore areas with high levels of salt. Spaces with near permanent condensation and high levels of air pollutants.	Not suitable; contact Plannja

The warranty period is counted from the date of delivery to the construction site or 18 months from the date of manufacture, whichever is the sooner.

Warranty conditions

The warranty applies to Plannja sheet used for roofing or wall cladding on buildings on condition that installation, annual inspection and maintenance have been carried out in a professional manner and in accordance with Plannja's directions and instructions. The brochure Advice on the choice of materials and maintenance of Plannja products, which is available at www.plannja.se, is supplementary to this warranty and its contents should be considered when selecting Plannja products, accessories, installation and maintenance.

The warranty is valid for the use of aluzinc 185 g/m² in normal environments as described in C1–C4; refer to Table 2. The warranty does not cover use in especially corrosive or aggressive environments e.g. in air with a high salt content such as saltwater coastal areas, or sheet in contact with water or where corrosive chemicals, corrosive fumes, condensation and ash, cement dust or animal droppings may affect the surface. The warranty does not cover the protective coating on the back of the sheet or surfaces with touch-up paint.

Contact with wet cement, wet timber, soil or other surfaces has been avoided and the sheet has not been used in contact with damp, corrosive materials that may cause galvanic corrosion.

The warranty does not cover damage that can be shown to arise from incorrect storage e.g. in damp, corrosive environments or at abnormal temperatures.

The product must be installed within six months from the date of invoice.

For damage to be covered by a warranty claim it must exceed 5% of the product's total installed surface area.

The product must be used in environments with weather conditions considered normal for the specified corrosion classes.

Claims must be made in writing to Plannja within three months of the date when the damage was discovered or should have been discovered. The dealer/supplier must be informed of warranty claims.

Plannja or Plannja's representative must be given an opportunity to inspect any product subject to claims under this warranty.

The warranty is also valid on condition that

- a) the product was installed in accordance with installation instructions and brochures valid at the time of purchase,

- b) metalwork takes place at temperatures specified in Plannja's Technical Data Sheets,
- c) bending radii comply with Plannja's Technical Data Sheet and that sheet metal is not subjected to heavy rebending,
- d) max temperature for use of Plannja Aluzinc is 80°C,
- e) suitable fasteners and sealants are used for the applicable corrosivity class,
- f) the product and its coating are not damaged mechanically or chemically,
- g) damage from metalworking that has caused penetration of the surface coating is remedied with touch-up paint by the installer or building owner,
- h) metal swarf from cutting, drilling and suchlike is removed immediately,
- i) water is able to run freely from all sheet metal surfaces,
- j) accumulations of dirt or other deposits and areas sheltered from rain have been washed in a workmanlike manner.

Compensation rules

If a legitimate claim is made according to the conditions of this warranty, Plannja undertakes, at its discretion, either to meet the costs, in whole or in part depending on the age of the sheet, of delivering new sheet free of charge to the purchaser as compensation for the defective sheet. Measures taken must be the most practical and at reasonable cost. Liability for costs is limited to the original invoiced amount for the sheet delivery concerned. Plannja will not provide compensation for loss of business. Plannja is not liable under any circumstances for direct or indirect losses arising from damage as described in this warranty. An warranty equivalent to the remaining original warranty period will apply to the replaced sheet.

The size of the compensation will take into consideration the number of years the building has fulfilled its function and its remaining service life. The guidelines below apply (Table 3).

Damaged sheets are replaced in cases where rust-through has caused leaks. This refers to sheet costs in the case of new sheet.

Warranty claims will be processed provided that the sheet material can be identified by order number and that a copy of the invoice or other purchase document is presented.

Table 3

>0–15 years	100
>15–25 years	50

*refer to Table 1 for warranty time.
